EXECUTIVE MESSAGE

CHAIR, Dr Stewart Routledge

ABOUT US

'KYEEMA' IS AN AUSTRALIAN ABORIGINAL WORD MEANING 'OF THE DAWN'. UNDERPINNING OUR WORK IS OUR DEVELOPMENT PHILOSOPHY THAT THROUGH HELPING PEOPLE TO IMPROVE THEIR LIVELIHOODS, WE WILL ASSIST THEM TO BRING NEW HOPE INTO THEIR LIVES AND TO HAVE A NEW DAWN.

The KYEEMA Foundation (KYEEMA) is a not-for-profit organisation based in Brisbane, Australia. Formed in 2003, KYEEMA aids in the development of treatments and cures for diseases affecting plants, animals and people living in developing countries, as well as helping with the development of technology to assist in improving the living standards of individuals in those countries.

At KYEEMA we believe that it does not require huge amounts of money to achieve large improvements in rural family incomes

and health, and consequently welfare of family members. Through activities including chicken rearing and vaccination, assistance for AIDS orphans, and research to reduce cyanide toxicity from eating bitter cassava we are helping individuals in resource-poor communities, particularly in rural and peri-urban Africa, to help themselves.

KYEEMA subsequently formed the International Rural Poultry Centre as a subsidiary through which all Newcastle Disease projects are implemented.

THIS PAST YEAR HAS SEEN ONGOING EXPANSION OF KYEEMA'S NORMAL ACTIVITIES INCLUDING INTO NEW ENDEAVOURS, LEADING TO ANOTHER SUCCESSFUL YEAR.

Annual Report message writing time is always a pleasure as it allows one to review the past year in a relaxed manner and reflect on our achievements. This past year has seen ongoing expansion of KYEEMA's normal activities including into new endeavours, leading to another successful year.

The EU funded project "Reduction and Control of Newcastle Disease in Angola" made great progress during the year. The government veterinary laboratory is being equipped for I-2 Newcastle Disease vaccine production, training of laboratory technicians continues, and a training manual is being prepared in Portuguese for national trainers of community vaccinators.

The ongoing AusAID funded "Regional Newcastle Disease Control Project - Malawi, Mozambique, Tanzania and Zambia - Phase II" continues to help many resource-poor rural families to improve capacity to support their everyday living, as well as educate their children and pay for their family medical costs. The four countries are in differing stages of progress, with Tanzania most advanced, where vast areas of rural communities now have regular access to the I-2 vaccine.

KYEEMA is collaborating with GALVmed on two initiatives: the VACNADA project funded by the EU; and ND control activities funded by the Bill and Melinda Gates Foundation. Through VACNADA we are providing laboratory needs assessments in Ghana, Senegal and the Congo.

A new activity for KYEEMA this year was providing mentoring and support for two volunteers working on various aspects of Newcastle disease control. KYEEMA was the Australian Partner Organisation for an Australian Youth Ambassador who

worked at the International Livestock Research Institute (ILRI) in Kenya for one year. We also organised a two month placement in Tanzania for a British volunteer. Both of these young women provided highly and very much appreciated contributions to their recipient organisations. We have been encouraged by the excellent outcomes and have been requested to undertake more of these volunteer assignments next year.

KYEEMA collaborated in an important "Cross-Border Disease Surveillance" study in southern Africa focusing on poultry for FAO, and a Save the Children (SC) funded project "Strengthening Livelihood Options for Vulnerable Rural Households in Gaza Province of Mozambique" as a contribution towards achieving the Millennium Development Goals (MDGs) through Newcastle Disease control.

We are looking forward to new challenges in 2012.

Now that the I-2 ND vaccination program is getting ND under control, rural farmers are asking for assistance in controlling Fowl Pox. Together with our in-country partners, KYEEMA will look at finding a satisfactory, affordable vaccine for use at village level.

I again thank our wonderful group of mostly volunteers that manage KYEEMA Foundation and the International Rural Poultry Centre for their dedication and hard work throughout the year. We aim to keep administration costs low to ensure that funds received contribute to improving the livelihoods of very poor rural families in developing countries in a cost-effective manner. We look forward to helping and facilitating many more such families in the next year to improve their livelihoods.

DR JOHN COPLAND AO

New Director Profile

JOHN COPLAND WAS ONE OF THE FOUNDING MEMBERS OF KYEEMA AND HE EXPLAINS BELOW WHY THIS ORGANISATION IS SO DIFFERENT FROM OTHER AID ORGANISATIONS.

As the former Foundation Research Project Manager for the Australian Centre for International Agricultural Research (ACIAR), my role was to identify priority research priorities that could be addressed collaboratively by Australia and partner countries. One such program priority was improvement of village poultry production, and a cornerstone of this was Newcastle disease control in village poultry.

This led to the establishment of an AusAID project in Mozambique, Tanzania and Malawi.

“This project gave all of us a sense of purpose and feeling of being relevant to the welfare of village communities and demonstrated the benefits of research for development.”

While I was working in ACIAR, it was very rewarding to establish a project with a sound set of research and development priorities, followed by a good project design, good people and adequate funding with relevant and useful outcomes that magnified into wide impacts in the village poultry production sector.

The integrity and drive of KYEEMA is something that sets the

organisation apart from many non-government organisations in the international scene. A key strength is the continuous commitment from long standing volunteers and staff, which have formed the backbone of the Foundation. Their mandate is consistent to broad scale development of the poorer communities such as village populations, which has made them highly relevant to the development process and they did not carry a ‘hidden agenda’. “Working with KYEEMA has been a positive feature of my time in ACIAR with the successes and efforts that they have had and that continue to be made by many in supporting the control of Newcastle disease in village poultry in Africa and Asia.”

From the work I’ve done I have a great appreciation of the efforts of others, in the conduct of the development process and the trials and tribulations that they overcame. The efforts of the Australian collaborators such as Peter Spradbrow, Robyn Alders and Mary Young and many national collaborators such as Dr Rosa Costa in Mozambique are outstanding and do give one a sense of pride in their achievements.

DR ROSA FELIZARDA DA COSTA

Staff Profile

"I AM WILLING TO CONTINUE WORKING AND CONTRIBUTING WITH MY KNOWLEDGE FOR THE IMPROVEMENT OF PEOPLE'S LIVELIHOODS IN THE REGION BECAUSE I KNOW HOW IMPORTANT CHICKENS ARE FOR PEOPLE HERE AND HOW THE NEWCASTLE DISEASE CONTROL PROGRAM CAN CHANGE THEIR LIFE".

At the moment I am working on the 'Phase 2: Regional Newcastle Disease Control' project which builds on the activities implemented under the AusAID Southern Africa Newcastle Disease Control Project.

"I became involved in the project because, after working for many years as the Director of the National Veterinary Research Institute in Mozambique, as a veterinarian specialised in pathology I wanted to do something more practical, directly related to my field of specialisation where I could contribute to the viability of the program at the farm level."

KYEEMA usually works with the local government personnel instead of hiring its own personnel to implement the activities and the capacity building is an important part of its interventions. This is very important for the continuity of its interventions. No better opportunity could have appeared than this.

When I stepped down as Director of the Institute I was asked to work full time with KYEEMA. I immediately said 'yes!', although it was a difficult decision to leave the Institute where I had been working for more than 20 years. However, I thought that I could

contribute more and learn more with KYEEMA where the work is more focused. Today, more than ever, I think that development programs benefiting the poorest among the rural farmers constitute the key for effective poverty eradication, and programs targeting these farmers should be given special attention. It is possible to make interventions that can change the lives of many people, even with very little resources.

I would like to say thank you to the staff of IRPC/KYEEMA for providing me the opportunity to work directly with farmers, and the great assistance from the Ministries of Agriculture and staff involved in the project activities in Malawi, Mozambique, Tanzania and Zambia. I would like to acknowledge the male and female farmers, community leaders and community vaccinators, for sharing and committing their time to the project.

In particular my sincere gratitude goes to the project Country Coordinators, to the KYEEMA Regional Manager, Tanya Radosavljevic, and to Celia Grenning, Robyn Alders and Mary Young for their support and patience. The project activities would not have been possible without the support of the Australian Government through AusAID, who generously provided funds.

MS JARRAH YOUNG

AYAD Project – Kenya

VOLUNTEERING WITH KYEEMA FOUNDATION

In collaboration with the International Livestock Research Institute (ILRI), IRPC/KYEEMA Foundation is hosting Ms Jarrah Young, an Australian Youth Ambassador for Development (AYAD) volunteer, to assist with implementing research on better understanding the factors that favour uptake and the constraints to Newcastle disease vaccine adoption. The project will help to identify appropriate strategies to improve the uptake of vaccination and complement the ongoing work with Newcastle disease control in southern Africa. The project is funded by AusAID and is being undertaken in Kenya and in Tanzania.

Based on Jarrah's excellent work, KYEEMA and ILRI are discussing further collaboration including hosting three more AYAD volunteer veterinarians, based in Kenya to work on assessing animal health and veterinary public health in three value chains: pig (Uganda), dairy (Tanzania), and sheep & goats (Ethiopia). KYEEMA and Jarrah will also develop a concept note for action research on ND vaccine delivery in Tanzania to strengthen and expand vaccine uptake, and research on I-2 Newcastle Disease vaccination impact assessment.

KYEEMA PROJECTS UNDERTAKEN IN 2010/2011

European Commission - Reduction and Control of Newcastle Disease in Angola

AusAID - Regional Newcastle Disease Control Project, Malawi, Mozambique, Tanzania and Zambia

Save the Children - Strengthening Livelihood Options for Vulnerable Rural Households in Gaza Province, Mozambique

FAO - Cross-Border Disease Surveillance Project

GALVmed cooperation

Smallholder Poultry Development Programme

EUROPEAN COMMISSION - REDUCTION AND CONTROL OF NEWCASTLE DISEASE IN ANGOLA

This project aims to reduce and control outbreaks of ND, which is a major concern for disadvantaged rural communities in Angola.

The program works directly with the Angolan Veterinary Services Institute of the Ministry of Agriculture and Rural Development and is based in Lubango in the south of Angola. The main objective is to set up a program for the control of ND. This entails working with the Veterinary Services Institute and the Veterinary Investigation Institute to produce local I-2 vaccine and set up vaccine laboratory and field trials.

Partner:

Angola Veterinary Services Institute of the Ministry of Agriculture and Rural Development.

Funding source:

The European Commission.

Impact:

Progress has been made in setting up a Steering Committee for the program, training of National Veterinary Services Institute staff in the production of I-2 vaccine and in setting up preliminary equipment needs for the laboratory for vaccine production.

SAVE THE CHILDREN - STRENGTHENING LIVELIHOOD OPTIONS FOR VULNERABLE RURAL HOUSEHOLDS IN GAZA PROVINCE, MOZAMBIQUE

Chickens are a very important part of domestic poultry in rural Mozambique as they fulfil the roles of sale, barter and traditional ceremonies within the family. Chickens are significant income contributors for the poorest household as they are very cost-efficient to raise, given that village chickens are usually run under a free-range, low input management system. ND is one of the major constraints to the production of chickens in Mozambique. This project aims to improve food security and contribute to poverty alleviation through ND control and improved poultry husbandry in project areas in four districts in Gaza Province.

This year KYEEMA worked with Save the Children staff to ensure timely production and distribution of ND vaccine, through enhancing project awareness and training of veterinary staff and community vaccinators. Activities such as a participatory rural appraisal and a reality checks study were implemented to evaluate the impact of the project on the communities and assess ways to improve delivery methodologies.

Partners

Ministry of Agriculture, Institute of National Disaster Management in Mozambique.

Funding Source

Save the Children (funded by the European Commission).

Impact

During the implementation of the project, KYEEMA has worked to ensure that the project's positive impact in the communities is sustained. Through co-ordinating vaccination campaigns and ongoing co-ordination of further activities with the Ministry of Agriculture through regular meetings, KYEEMA will facilitate support for these communities in Mozambique.

AusAID - REGIONAL NEWCASTLE DISEASE CONTROL PROJECT, MALAWI, MOZAMBIQUE, TANZANIA AND ZAMBIA

Newcastle disease (ND) is a major constraint in the development of village poultry production in sub-Saharan Africa. In village poultry ND can be prevented by using a suitable vaccine such as thermotolerant I-2 ND vaccine, effective extension materials and methods, community-based training and education activities, and long-term commitment. Cost recovery and cost minimisation mechanisms for the ND vaccine and its administration make vital contributions to sustainable ND control programs.

Phase II of the ND control project is being implemented in Malawi, Mozambique, Tanzania and Zambia and aims to improve livelihoods of the target population through a program that is:

- Strengthening the capability of, and relationship between, stakeholders in order to successfully implement ND control programs; and
- Achieving a decrease in chicken mortality rates caused by ND in project areas.

The goal of the project is to increase village poultry production in project areas to contribute to food security and poverty alleviation.

Partners

The Ministry of Agriculture /Livestock Development and Fisheries in Malawi, Mozambique, Tanzania and Zambia, the

Central Veterinary Laboratories and the Directorate of Animal Science of the Mozambican Agricultural Research Institute.

Funding source

The Australian Agency for International Development (AusAID)

Impact

Project activities have contributed to a more robust approach to addressing ND control by supporting I-2 vaccine production and human resource development at the central veterinary laboratories, raising awareness of ND control and implementation of regular vaccination campaigns in the four countries involved. The outcomes of the project are expected to be a strengthened capability of, and relationship between, stakeholders in order to successfully implement ND control programs in Malawi, Mozambique, Tanzania and Zambia, and a decrease in chicken mortality rates caused by ND in project activity areas. The benefits to rural, resource-poor male and female farmers will be increased survival of chickens, improved nutrition and increased income.

FAO - CROSS-BORDER DISEASE SURVEILLANCE PROJECT

Highly pathogenic avian influenza (HPAI) can be spread by trade in poultry. Understanding the behaviour of people engaged in poultry production, trade and processing is necessary to understand the motivation for change and successful disease control. In June and July 2010, the International Rural Poultry Centre (IRPC) of KYEEMA Foundation collaborated in a multi-disciplinary approach to common border HPAI surveillance sampling.

Funded by FAO, the two month mission involved an anthropologist, veterinarians, and animal health and production officials. The IRPC/KYEEMA Foundation input was designed to strengthen the multi-disciplinary approach to transboundary animal disease surveillance through including participatory approaches in the collection and analysis of data from men and women who produce, transport, sell and/or process poultry and poultry products, and those who are responsible for regulation of cross-border activities in communities in selected border areas in Malawi, Mozambique, Zambia and Zimbabwe.

The IRPC/KYEEMA Foundation, as a key partner in the cross-border disease surveillance mission, implemented a sociological investigation using participatory approaches to investigate and analyse information on the:

- Appropriateness of bio-security measures (including movement controls, use of natural and artificial borders, commercial management and husbandry practices);
- Cross-border legal and illegal poultry trade flows, including quantification of trade;
- Knowledge of the detection, identification and surveillance of diseases in the different target groups, specifically HPAI; and
- Analysis of factors affecting HPAI preparedness as well as gender differences in knowledge, attitudes and behaviour in relation to poultry trade and HPAI.

GALVMED COOPERATION

KYEEMA Foundation is working with GALVmed (Global Alliance for Livestock Veterinary Medicine), a UK-based animal health charity, to support I-2 ND vaccine related activities in Africa. KYEEMA is supporting the ND components of two GALVmed projects: 1) The VACNADA (Vaccine for the Control of Neglected Animal Diseases in Africa) project funded by the European Union (EU) via the Africa Union-Interafrican Bureau for Animal Resources (AU-IBAR) and 2) A project funded by both the Bill & Melinda Gates Foundation and the UK Government's Department for International Development that aims to improve prevention, diagnosis and treatment for a range of leading livestock diseases in developing countries.

The VACNADA project is focused on four diseases, including Newcastle disease, and is enhancing the capacity of African vaccine producers in national laboratories to produce more vaccine of higher quality. The support covers technical and

marketing training and coaching, and provision of key equipment and facilities, such as freeze driers. This year Dr Mary Young, KYEEMA Foundation's Technical Manager, conducted Laboratory Needs Assessments for the VACNADA project in Ghana (Accra Veterinary Laboratory), Democratic Republic of Congo (Laboratoire Vétérinaire Central, Kinshasa), and Senegal (Laboratoire National d'Élevage et de Recherches Vétérinaires, Dakar). Subsequent visits were made to Ghana and Kinshasa to assess and report progress on infrastructure modifications and equipment purchases.

KYEEMA is also providing expert technical advice to support the development of a generic registration dossier, commercialisation and sustainable delivery of a vaccine based on the thermotolerant I-2 ND virus strain. KYEEMA will also be supporting pilot sustainable vaccine delivery systems in Tanzania, Lesotho, DR Congo and Cameroon.

SMALLHOLDER POULTRY DEVELOPMENT PROGRAMME

With support from International Fund for Agricultural Development (IFAD) and in collaboration with the International Rural Poultry Centre (IRPC) of the KYEEMA Foundation, the UN Food and Agriculture Organization (FAO) is currently implementing a project "Small holder poultry development programme" to strengthen and further develop the International Network for Family Poultry Development to enable it to continue to raise the international profile of family poultry production through achieving four objectives: i) Training of

twelve (12) young scientists as Associate Poultry Advisors (APAs); ii) Development of appropriate decision tools and training materials; iii) Provision of information material; and iv) Sharing and dissemination of relevant information related to small scale poultry production through a strengthened INFPD. In July 2011, Drs Robyn Alders and Brigitte Bagnol provided training to the second batch of APAs who then went on to implement field placements in Africa and Asia.

FINANCIAL SUPPORTERS AND DONATIONS

GRM International has been supporting KYEEMA since its inception, through the provision of office space and administrative and financial support. This valuable support has allowed KYEEMA to establish and expand its work around the world. In addition the GRM "Communities First Fund" and staff personally have made important financial contributions to KYEEMA field project activities since its inception.

We would also like to thank our key donor, AusAID for continued support to ND control activities in Southern Africa.

ACIAR has continued to support us through the provision of ND publications for laboratory and field activities.

The University of Queensland Veterinary School maintains and continues to provide free of charge the I-2 ND master seed.

Other donors who have supported KYEEMA in this past year and who we would like to thank include the European Commission, Food and Agriculture Organization, International Fund for Agricultural Development, Save the Children Mozambique.

Mrs. Jill Cameron is a key annual donor to KYEEMA Foundation and her support towards our valuable work is very important and appreciated each year and we say thank you.

KYEEMA TEAM AND ACKNOWLEDGEMENTS

KYEEMA FOUNDATION POLICIES

GOALS, TRANSPARENCY, NON-ALIGNMENT, ENVIRONMENT, CHILD PROTECTION & REPORTING.

The vision, purpose and values of KYEEMA Foundation are described in the Constitution and are rigorously upheld. KYEEMA is primarily involved in scientific and educational developmental activities. KYEEMA is not involved in any non developmental activity.

KYEEMA is apolitical and does not support any religious views or groups, which is stated in the KYEEMA Constitution and is evident in our Annual Reports and website.

KYEEMA is known in Africa for its primary focus on helping to make improved smallholder rural poultry production accessible to all members of poorer communities, primarily through the promotion of ND vaccination campaigns. KYEEMA's interest and capacity are communicated by Newsletters, Annual and Project Reports and the KYEEMA website.

KYEEMA's overall approach is consistent with building up strong mutual respect, transparency, honesty, openness and a two way learning, communication and support relationship that reinforces the development outcomes and accountability with all our partners. KYEEMA has gained a good reputation for total inclusiveness and the development of open and strong relationships with rural communities and local and national governments in countries where it is working. Our theme is local community partnership and action with KYEEMA providing the catalyst for development as our fundamental approach.

KYEEMA is acutely aware of the importance of environmental sustainability. KYEEMA projects build on existing natural resources and KYEEMA is not involved in activities like forestry or fisheries exploitation.

KYEEMA ensures that internationally recognised human rights principles are adhered to in the overall conduct of all KYEEMA activities in the field and throughout the organisation. KYEEMA endorses the principles of child protection and addresses this important issue in their Child Protection Policy. KYEEMA only recruits people who have the appropriate skills and does not discriminate against anyone internationally or in Australia.

KYEEMA places a major emphasis on the rights of vulnerable and marginalised people. This is a major theme and objective as outlined in the Constitution. The past history of KYEEMA activities has focused on smallholder village poultry production systems in Mozambique, Tanzania, Malawi, Zambia and Angola. Mozambique and Angola have suffered major conflicts which have resulted in marginalised families with women and sometimes children heads of household who have been a focus for KYEEMA.

KYEEMA recognises the importance of its Annual Report as an accountable document to stakeholders and donors. KYEEMA currently circulates the Annual Report to Stakeholders.

Details of KYEEMA Foundation policies on child protection, non-government activities and complaints are listed on the KYEEMA website: www.kyeemafoundation.org

Australia

Dr Mary Young - Technical Manager
Winky Sham, Finance Officer (part-time)

Mozambique

Tanya Radosavljevic - Regional Manager to February 2011
Dr Jan Wiesenmuller - Regional Manager from March 2011
Dr Rosa Costa, Manager - Project Manager, AusAID Phase 2 Regional ND Control Project
Dr Ana Zandamela – Veterinary Project Coordinator
Virginia Licula - Administration and Finance Officer
Odete Sambo - Administration and Finance Adviser (part-time)
Ana Iza Machengo – Mozambique Scholarships Assistant
Armando Romão - Logistics Officer, translator and driver
João Machava - Driver
